Contenido

Introducción	5
Códigos y abreviaturas	6
PLAGAS por HOSPEDEROS	7
Varios granos almacenados stored-grain	8
Araceae <i>Colocasis spp</i> malanga dasheen	8
Araceae <i>Xanthosoma spp</i> tiquisque eddoe	8
Compositae <i>Lactuca sativa</i> lechuga lettuce	9
Convolvulaceae <i>Ipomoea batatas</i> camote sweet potato	9
Cruciferae <i>Brassica napus</i> nabo turnip	11
Cruciferae <i>Brassica oleracea botrytis</i> coliflor cauliflower	12
Cruciferae <i>Brassica oleracea italica</i> brocoli broccoli	12
Cruciferae <i>Brassica oleracea nigra</i> mostaza mustard	12
Cruciferae <i>Brassica oleracea vars</i> repollo cabbage	13
Cruciferae <i>Raphanus sativus</i> rabano raddish	14
Cucurbitaceae <i>Citrullus spp</i> sandía watermelon	14
Cucurbitaceae <i>Cucumis melo</i> melón cantalope	15
Cucurbitaceae <i>Cucumis sativus</i> pepino cucumber	16
Cucurbitaceae <i>Cucurbita spp</i> ayote squash	17
Cucurbitaceae <i>Sechium edule</i> chayote chayote	19
Euphorbiaceae <i>Manihot esculenta</i> yuca cassava	19
Gramineae <i>Oryza sativa</i> arroz rice	21
Gramineae <i>Sorghum bicolor</i> sorgo sorghum	24
Gramineae <i>Triticum aestivum</i> trigo wheat	25
Gramineae <i>Zea mays</i> maíz maize	26
Leguminosae <i>Cajanus cajan</i> gandul pigeon pea	30
Leguminosae <i>Cicer arietinum</i> garbanzo chickpea	31
Leguminosae <i>Glycine max</i> soya soybean	32
Leguminosae <i>Phaseolus lunatus</i> frijol lima lima bean	33
Leguminosae <i>Phaseolus vulgaris</i> frijol bean	34
Leguminosae <i>Pisum sativum</i> guisantes arveja pea	39
Leguminosae <i>Vicia faba</i> haba broad bean	40
Leguminosae <i>Vigna unguiculata</i> caupi cowpea	41
Liliaceae <i>Allium cepa</i> cebolla onion	42
Quenopodiaceae <i>Beta vulgaris</i> remolacha beet	43

Quenopodiaceae <i>Spinacia oleracea</i>	spinaca	spinach	44
Solanaceae <i>Capsicum spp</i>	chile	pepper	44
Solanaceae <i>Lycopersicon esculentum</i>	tomate	tomato	46
Solanaceae <i>Solanum melongena</i>	berengena	eggplant	48
Solanaceae <i>Solanum tuberosum</i>	papa	potato	50
Umbelliferae <i>Daucus carota</i>	zanahoria	carrot	53
TAXONOMIA	55

Introducción

Esta publicación comprende una lista por hospederos de plagas, de cultivos seleccionados de América Central y una lista taxonómica.

La lista de hospederos indica, para cada cultivo, la parte atacada de la planta, la clase de daño y la etapa de desarrollo en que la plaga lo causa. La lista taxonómica presenta el orden, familia, nombre científico y nombres comunes de las plagas.

La taxonomía se ha basado en una lista preliminar conocida como *Plagas insectiles de América Central*, documento de trabajo, preparado por J. L. Saunders en 1979. La mayor parte de los nombres han sido verificados por el Laboratorio Sistemático de Entomología, IIBIII, del Departamento de Agricultura de los Estados Unidos, con la ayuda de algunos de sus colaboradores. Igualmente, se contó con la colaboración del Departamento de Entomología del Instituto Smithsonian.

Especial reconocimiento merecen el Dr. Lloyd Knutson y el Sr. William L. Murphy del IIBIII, por su valiosa colaboración, sin la cual este trabajo no se habría podido realizar. El Dr. Frank Peairs del CATIE, revisó la lista y recomendó varias modificaciones de utilidad. El Dr. D.W.S. Sutherland de la Agencia para la Protección del Ambiente de los Estados Unidos, aportó sugerencias en apoyo del proyecto. Finalmente, el establecimiento de una base computarizada de datos para la preparación de las listas fue posible gracias a la valiosa colaboración del Dr. Julio Henao, la Lic. Silvia Ramírez y el Dr. Robin Selvage.

Existen, sin duda, errores en este trabajo por los cuales los autores aceptan toda responsabilidad. La lista de plagas por hospederos, en especial, necesita la ayuda de los científicos regionales para su refinamiento. Por esta razón los autores agradecen de antemano cualquier sugerencia o ayuda de personas interesadas en mejorar este trabajo.

This report includes a Host/Pest Reference for selected crops in Central America as well as a Taxonomic list.

The Host/Pest Reference lists pests for individual crops and is subdivided by damage site, damage type and taxonomy. It also indicates the development stage that causes the damage. The Taxonomic list presents order, family, scientific names and common names of crop pests.

The taxonomic list is based on a previous list, "*Plagas Insectiles de América Central*", produced as a working document by J. L. Saunders in 1979. Most of the names have been checked by the USDA Systematic Entomology Laboratory, IIBIII, with some assistance from their collaborators and the Department of Entomology at the Smithsonian Institute.

Special acknowledgement is due to Dr. Lloyd Knutson and Mr. William L. Murphy of IIBIII for their most valuable collaboration. Without their help this work could not have been realized. Dr. Frank B. Peairs reviewed the list and made several useful modifications. Dr. D.W.S. Sutherland of the US Environmental Protection Agency made suggestions in support of the project. Establishment of a computerized data base for preparing the lists was made possible through the valuable assistance of Dr. Julio Henao, Lic. Silvia Ramírez and Dr. Robin Selvage.

There are undoubtedly errors, for which the authors take responsibility. This Host/Pest Reference will especially need the assistance of regional scientists for future refinement. The authors invite interested individuals to participate in the improvement of these lists. Suggestions and assistance will be greatly appreciated.

Códigos y abreviaturas

SIT	Sitio del daño	Site of damage
FL	Flor	Flower
FO	Follaje	Foliage
FR	Fruto	Fruit
RT	Raíz, tubérculo	Roots, tubers
T	Tallo, tronco, pecíolo	Trunk, stalk, petiol
P	Producto almacenado	Stored product
B	Brotos, botones	Buds, shoots

TPD	Tipo de daño	Type of damage
MAS	Masticador	Chewing
SUC	Succionador, raspador-chupador	Sucking, rasping-sucking
MIN	Minador, barrenador	Mining, boring
OVI	Oviposición	Oviposition
